SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	03/20/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

# Office Action Summary

Application No.

10/020,355

Applicant(s)

TOGASAKI, SHINOBU

Examiner

Charles E. Anya

Art Unit

2194

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 11 December 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-6,8-19,23-26 and 30-32 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-6,8-19,23-26 and 30-32 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- ☐ Notice of Informal Patent Application
- ☐ Other: \_\_\_\_\_.

### **DETAILED ACTION**

1. Claims 1-6,8-19,23-26 and 30-32 are pending in this application.

#### ***Specification***

2. **The disclosure is objected to because of the following informalities:**

Line 12 of the specification seems to include typographical error. Specifically, "by" appears to have been used in error. Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1-6,8,10-13,15,16,18 and 23-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,128,657 to Okanoya et al. in view U.S. Pat. No. 6,173,322 B1 to Hu.**

5. As to claim 1, Okanoya teaches a method for routing a transaction to a front-end server (figures 1-5/15-17), comprising: identifying at least one attribute-based category for said transaction (S52 "...search key..." Col. 11 Ln. 8 - 21), identifying at least one of a plurality of front-end servers to process said transaction based at least in part on said

Art Unit: 2194

identified attribute- based category of said transaction (S54 "...selects some candidate servers..." Col. 11 Ln. 19 – 21); at least in part on said front-end servers being assigned to execute transactions corresponding to said attribute-based category (Col. 11 Ln. 59 – 67); when at least one of the front-end server is identified (S54 Col. 19 – 21) and routing said transaction to one of said at least one identified front- end servers (S57 Col. 11 Ln. 36 – 39).

Okanoya is silent with reference to when no front-end server is identified, routing said transaction to a default one of the front-end servers and determining whether the transaction is associated with a new attribute-based category and if so, assigning the new attribute-based category to the default one of the front-end servers.

Hu teaches when no front-end server is identified, routing said transaction to a default one of the front-end servers and determining whether the transaction is associated with a new attribute-based category and if so, assigning the new attribute-based category to the default one of the front-end servers ("...for whatever reason...forwards the client request to a default content server 106" Col. 11 Ln. 60 – 67, Col. 12 Ln. 1 – 9).

It would be obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Okanoya with the teaching of Hu because the teaching of Hu would improve the system of Okanoya by providing a request routing scheme that allows a server's failure to service a request to be handled without disrupting the client that sent the request (Hu Col. 2 Ln. 66 – 67).

Art Unit: 2194

6. As to claim 2, Okanoya teaches a method as in claim 1, further comprising assigning said at least one attribute-based category to said transaction (S52 "...search key..." Col. 11 Ln. 8 - 21)..

7. As to 3, Okanoya teaches a method as in claim 2, wherein assigning said at least one attribute-based category to said transaction comprises associating a tag with said transaction ("...character string..." Col. 12 Ln. 1 – 5, Ln. 35 – 42).

8. As to claim 4, Okanoya a method as in claim 1, wherein identifying said at least one front-end server comprises comparing said attribute-based category for said transaction to assigned attribute-based categories for said plurality of front-end servers (Key 75a Col. 11 Ln. 59 – 67, "...comparing..." Col. 16 Ln. 61 – 67).

9. As to claim 5, Okanoya teaches a method as in claim 1, further comprising determining whether said at least one front-end server is available for processing said transaction (S54-S56 Col. 11 Ln. 22 – 39).

10. As to claim 6, Okanoya teaches a method as in claim 1, further comprising rerouting said transaction to another of said plurality of front-end servers when said identified server refuses said transaction (S55 Col. 11 Ln. 26 – 33).

Art Unit: 2194

11. As to claim 8, Okanoya teaches a method as in claim 1, further comprising notifying a workload manager of said at least one front-end server assigned to said new attribute-based category ("...back..." Col. 11 Ln. 59 – 67).

12. As to claims 10 and 11, see the rejection of claims 1 and 2 respectively.

13. As to claim 12, Okanoya teaches an apparatus as in claim 10, wherein said attribute-based category is based on at least one "real" attribute of said transaction (Col. 11 Ln. 59 – 67).

14. As to claim 13, Okanoya teaches an apparatus as in claim 10, wherein said attribute-based category is based on at least one "perceived" attribute of said transaction ("...name..." Col. 12 Ln. 1 – 5).

15. As to claim 15, see the rejection of claims 5 and 6 above.

16. As to claim 16, Okanoya teaches an apparatus as in claim 10, further comprising program code for assigning a number of attribute-based categories to each of said plurality of front-end servers, wherein said program code for routing said transaction to one of said identified front-end servers routes said transaction according to said assigned attribute-based categories (Col. 11 Ln. 59 - 67).

Art Unit: 2194

17. As to claim 18, Okanoya teaches an apparatus as in claim 16, further comprising a workload manager table for recording said assigned attribute-based categories (State Manager 111 Col. 11 Ln. 59 – 67).

18. As to claim 23, Okanoya teaches a method as in claim 1, wherein identifying said at least one attribute-based category for said transaction comprises identifying a "perceived" attribute of said transaction ("...name..." Col. 12 Ln. 1 – 5).

19. As to claim 24, Okanoya teaches a method as in claim 23, wherein the identified "perceived" attribute is the computer originating the transaction ("...name..." Col. 12 Ln. 1 – 5).

20. As to claim 25, Okanoya teaches a method as in claim 23, wherein the identified "perceived" attribute is the user originating the transaction ("...name..." Col. 12 Ln. 1 – 5).

21. As to claim 26, Okanoya teaches a method as in claim 23, wherein the identified "perceived" attribute is a class of users from which the transaction originates ("...name..." Col. 12 Ln. 1 – 5).

**22. Claims 9 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,128,657 to Okanoya et al. in view U.S. Pat. No. 6,173,322 B1 to**

Art Unit: 2194

**Hu as applied to claims 1 or 10 above, and further in view of U.S. Pat. No.**

**6,681,244 B1 to Cross et al.**

23. As to claim 9, Okanoya is silent with reference to a method as in claim 1, further comprising: determining a status of an attribute-based category; and deallocating said attribute-based category from said front-end server to which it is assigned when said status is inactive.

Cross teaches a method as in claim 1, further comprising: determining a status of an attribute-based category; and deallocating said attribute-based category from said front-end server to which it is assigned when said status is inactive (Col. 6 Ln. 15 - 27).

It would be obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Okanoya with the teaching of Cross because the teaching of Cross would improve the system of Okanoya by regulating client request routing (Cross Col. 6 Ln. 15 - 27).

24. As to claim 19, see the rejection of claim 9 above.

**25. Claims 14,17 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,128,657 to Okanoya et al. in view U.S. Pat. No. 6,173,322 B1 to Hu as applied to claim 10 above, and further in view of U.S. Pat. No. 5,864,679 to Kanai et al.**

Art Unit: 2194

26. As to claim 14, Hu and Okanoya are silent with reference to an apparatus as in claim 10, further comprising a user table for assigning said at least one attribute-based category to said transaction.

Kanai teaches an apparatus as in claim 10, further comprising a user table for assigning said at least one attribute-based category to said transaction (Col. 15 Ln. 45 – 62).

It would be obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Hu and Okanoya with the teaching of Kanai because the teaching of Kanai would improve the system of Hu and Okanoya by providing a table that allows for the ability of locate transaction associated transaction processor (Kanai Col. 25 Ln. 46 – 59).

27. As to claim 17, Kanai teaches an apparatus as in claim 16, wherein said program code for assigning at least one attribute-based category to each of said plurality of servers bases the assignment at least in part on an affinity of transaction attributes (figure 23 Col. 18 Ln. 51 - 67, Col. 19 Ln. 12 - 37).

28. As to claim 32, Kanai teaches an apparatus as in claim 10, further comprising program code to update, in response to broadcast indications from said front-end servers, a table of which attribute-based categories are assigned to which front-end servers, said table being maintained by and for a particular workload manager (Transaction Table 126 Col. 25 Ln. Ln. 39 – 46).

**29. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,128,657 to Okanoya et al. in view of U.S. Pub. No. 2002/0161917 A1 to Shapiro et al.**

30. As to claim 30, Okanoya teaches a method for routing a transaction to a front-server, comprising: identifying at least one attribute-based category for said transaction (S52 "...search key..." Col. 11 Ln. 8 - 21), attempting identifying at least one of a plurality of front-end servers to process said transaction based at least in part on said identified attribute-based category of said transaction (S54 "...selects some candidate servers..." Col. 11 Ln. 19 - 21); at least in part on said front-end servers being assigned to execute transactions corresponding to said attribute-based category (Col. 11 Ln. 59 - 67); and routing said transaction to one of said at least one identified front-end servers (S57 Col. 11 Ln. 36 - 39); one or more of said front-end servers, maintaining its own table of attribute-based categories for transactions that it has processed; for each attribute-based category in its table, maintaining an indication of when a transaction corresponding to the attribute-based category was last processed by the front-end server (State Manager 111 Col. 11 Ln. 59 - 67).

Okanoya is silent with reference to after a predetermined time of not processing a transaction corresponding to an attribute-based category in its table, broadcasting an indication of this event to a plurality of workload managers that can route transactions to the front-end server.

Shapiro teaches after a predetermined time of not processing a transaction corresponding to an attribute-based category in its table, broadcasting an indication of this event to a plurality of workload managers that can route transactions to the front-end server (“...poor goodness...” page 6 paragraphs 0070/0071).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify to system of Okanoya with the teaching of Shapiro because the teaching of Shapiro would improve the system of Okanoya by dynamically routing data within a network such that a node determines an efficient method of transmitting the data based on the routing information, and transmitting the data to a neighbor node based on the determination of the efficient method (Shapiro page 1 paragraph 0009).

**31. Claim 31 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,128,657 to Okanoya et al. in view of U.S. Pub. No. 2002/0161917 A1 to Shapiro et al. as applied to claim 30 above, and further in view of U.S. Pat. No. 5,864,679 to Kanai et al.**

32. As to claim 31, Shapiro and Okanoya are silent with reference to a method as in claim 30, further comprising: upon a workload manager's receipt of said broadcast association, the workload manager updating its own table of assignments between attribute-based categories and front-end servers.

Kanai teaches a method as in claim 28, further comprising: upon a workload manager's receipt of said broadcast association, the workload manager updating its own table of assignments between attribute-based categories and front-end servers (Transaction Table 126 Col. 25 Ln. 39 – 46).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify to system of Shapiro and Okanoya with the teaching of Kanai because the teaching of Kanai would improve the system of Shapiro and Okanoya by providing a table that allows for the ability of locate transaction associated transaction processor (Kanai Col. 25 Ln. 46 – 59).

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles E. Anya whose telephone number is (571) 272-3757. The examiner can normally be reached on M-F (8:30-6:00) First Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, An Meng-Ai can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
